SUMMER FLICKS
at the Goddard Library

Wednesday, July 14
2:00 PM
Goddard Library - Building 21

featuring two NASA films:

Viking

This exciting film takes a look back at the early history of Mars exploration. This 1976 NASA film was made before the Viking probes reached Mars on their landmark mission. It chronicles the Viking project planning and objectives, the problems and concerns which arose, and their eventual solution.

19 Minutes to Earth

Results from the Viking orbiters and landers are featured in this 1978 NASA video. Marking the real beginning of our understanding of the planet Mars, the film features the early images from the orbiters and landers and discusses the meteorological, geological, and biological data returned from the planet.

Dr. Dave Williams from Code 600 will be on hand to discuss the movies.

Soda and Popcorn will be served!
